Founder – Kyugoro Sakata

Sailor

Original Trademark

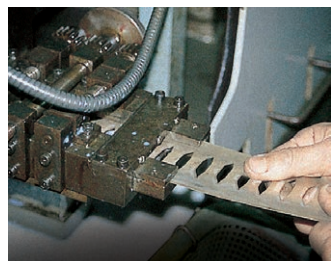

THE SAILOR PEN CO., LTD.

In 1911 Mr. Kyugoro Sakata, an engineer from the historic naval port of Hiroshima in Japan was introduced to a Fountain Pen brought from England by a sailor friend and he then became determined to produce finely crafted writing instruments in Japan with the highest specification and writing performance. Mr. Sakata decided to call the Company SAILOR PEN in the expectation that the business would expand internationally like the voyages of a sailor.

Sailor Pen thus became the first Company to produce Fountain Pens in Japan and it is still one of the oldest established Companies in the industry. The Sailor Pen Company has proudly maintained this heritage of quality and technical perfection over the 100 years of existence. Still today it offers the customer a unique variety of writing Instruments enhancing the pleasure of the writing experience.

NIB PRODUCTION PROCESS

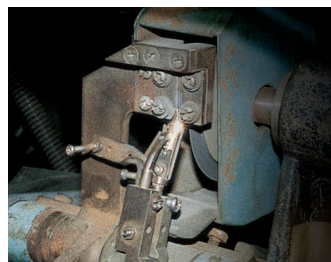

STEP 1

Firstly gold and other precious materials are melted and then rolled into plate. It is then punched into shape and special tipping material is carefully applied to the pen nib. This tipping material determines the nib width, and it is polished extensively.

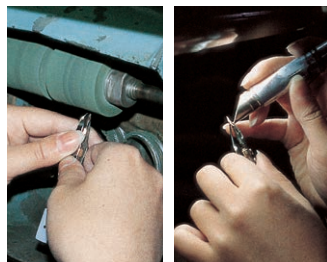

STEP 2

The whole nib including the tip is then slit down the middle to meet a carefully positioned hole cut on the center of the nib. This process determines the perfect ink flow and nib elasticity and is critical to maintain perfection.

STEP 3

Finally the top of the nib and tip are shaped to ensure the smoothest writing quality.

STEP 4

A final buffing of the nib gives it a fascinating sparkle.

NIB LINEUP

To cater for individual preferences and purpose of use, Sailor offers a range of available nib grades with most of the models.

URUSHI

Urushi lacquer is a very special natural material, which is made from the sap of trees, which only grow in East Asian countries. This Urushi is in very limited supply. The deciduous Urushi tree takes 15 years to reach maturity and each mature tree can only supply 200 grams of sap. The Urushi sap (which is poisonous) is then mixed with other compounds to form the lacquer. When hand applied to the surface of the pen and kept in high humidity it slowly sets (hardens) into a hard durable and lustrous finish, which is waterproof and resistant to most other materials. This special lacquered surface protects the pen in the best possible manner. The Urushi is applied in up to 12 separate coatings, all of which have to fully harden and dry before the next application. The total process can take up to two months to prepare. The plain Urushi lacquers have been traditionally used to decorate materials in Japan since the Jomon period (200 years ago).

1911

Named in honor of the foundation date of Sailor Pen, the remarkable 1911 product was first introduced more than 30 years ago. It has maintained the high quality materials and craftsmanship from the beginning and is available in many different materials and surface finishes. The smooth balance and the writing quality of the wide selection of 21K and 14K solid gold nibs available for these models is testament to over 100 years of experience in manufacture of quality writing instruments at Sailor.

REALO

The feature of REALO is piston filling system which submerge nib in ink and rotate the back button.

1911  PROFESSIONALGEAR

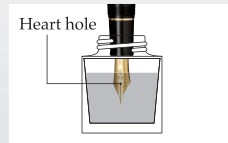

PISTON FILLING SYSTEM

Sailor has chosen a self-filling system "Piston filling system". To fill the "REALO" simply dip in any ink and rotate a back button and it fills its own tank.

INK TANK WINDOW

Sailor uses a special clear window to observe the ink reservoir with large ink capacity - 1.5mls. Easily confirms remaining ink volume.

NIB

The hole in the centre of the nib must be completely covered by ink to ensure the ink can be drawn into the reservoir. Take care not to cover the gripping section with ink.

※Ink Cartridge or ink converter cannot be used.
